

## Concept 900 mm deep workbench frames

Due to the increased customer needs for the deeper benches, we will now introduce Concept workbench frame with a 900 mm deep frame structure. With the included support plate in 1500-2000 mm wide frames, the structure is sturdy even when used with fully loaded uprights (loading capacity 100 kg per module).

Concept 900 mm deep workbench frames include:

- 750 mm deep frame, but with 150 mm longer feet
- Extension part pair 860634-49
- Support plate for 1500, 1800, 2000 mm wide frames

Along with the 900 mm wide frame structure, we will discontinue the extension part pair 860634-49 by 31.12.2019 as it is no longer needed as a separate item (it will be removed from the catalogue and website during April).

Allen key and crank versions have already the new front C-profiles (instead of the old bended front list) and thus the suitable drawer unit fastening sets are:

- 890653-49 for Concept allen key and hand crank adjustable frames
- 854463-49 for Concept motor adjustable frames

### ADDITIONAL INFORMATION

- Available starting from 3rd June 2019.
- New items are already in the updated Ergonomic workspaces Flipbook catalogue 04/2019 in our website. New items will be available in our website during May.
- Pricing: 750 mm deep frame + extension part pair = 900 mm deep frame
- For additional information, please kindly contact Customer Service at [sales@treston.com](mailto:sales@treston.com)
